AESTHETIC PHYSICIAN ASSISTANT
TARA AVIDAR, LE,
CLINICAL AESTHETICIAN

Dr. Bucky has been in practice for over 25 years and has created four office locations of Bucky Plastic Surgery & Bucky Body Center. "Collectively, we have degrees as Physician Assistants, Registered Nurses, and Licensed Estheticians with a focus on cosmetic enhancement and recovery to provide the most well-rounded skin care experience in the region."

Bucky Plastic Surgery & Bucky Body Center offers solutions for all skin types and tones and caters to an array of personal preferences, like downtime. They are expertly trained to create fully customized plans to treat the unique goals and skin of their patients. Brands come to them first with their newest innovations because they know they will deliver the best and safest results.

In recent years, the team at Bucky has noticed patients finding a greater understanding that beauty and well-being go hand-in-hand. That was the genesis for the Bucky Body Center – to enhance the way you look and feel at the same time. You can boost radiance, tighten skin, contour your body, and improve muscle tone all under the same roof through treatments like microsuction, medical weight loss, compression therapy, and more.

Bucky Plastic Surgery just launched their new non-surgical membership program, the Frequent Filler Program, that makes healthy-looking, radiant skin easy and achievable for all. Members sign up for annual customized skin care and injectable treatments and pay monthly so results won't fade and you won't break the bank – as low as \$275/month. They are also excited about their newest technology, Ellacor. Developed by Harvard scientists, it tightens skin and removes wrinkles around the mouth and lower face through advanced microcoring. "It's the most effective non-surgical facial skin tightening option on the market and we're the first and only practice in the region to offer this."
